12. A television receiver comprising a program-guide-display controlling apparatus for displaying a plurality of program guides on a display unit in a matrix form by using one of the ordinate and the abscissa as a channel number axis and another one as a time axis, said program-guide-display controlling apparatus comprising

B setting means for allowing an arbitrary time ^{period} ~~zone~~ to be set by a user and

B discriminatingly displaying means for effecting display to discriminate the time ^{period} ~~zone~~

B set by the user and other time ^{periods} ~~zones~~.

CONT.

B setting means for allowing an arbitrary time ^{period} ~~zone~~ be set by a user and

B discriminatingly displaying means for effecting display to discriminate the time ^{period} ~~zone~~

B set by the user and other time ^{periods} ~~zones~~,

wherein said setting means allows the starting time and the ending time of an

B arbitrary time ^{period} ~~zone~~ to be set by the user, and

said discriminatingly displaying means causes a region corresponding to the time

B ^{period} ~~zone~~ set by the user and a region corresponding to the other time ^{periods} ~~zones~~ to be

displayed in different colors in a display region in which the plurality of program guides are displayed.--
